Description:
Default bool parser.

Added In: v0.45

Function

```
    public class UMFConfigBool : UMFConfigParser<bool>
    {
        public bool? DefaultValue;
        public bool? VanillaValue;
        public bool RequiresRestart;

        public UMFConfigBool(bool? defaultValue = null, bool? vanillaValue =
null, bool requiresRestart = false)
        {
            DefaultValue = defaultValue;
            VanillaValue = vanillaValue;
            RequiresRestart = requiresRestart;
        }

        public override bool Parse(string value)
        {
            if (!bool.TryParse(value, out bool result)) result =
DefaultValue ?? false;
            return result;
        }

        public override string ToString()
        {
            return DefaultValue.ToString() ?? null;
        }

        public override string Default()
        {
            return DefaultValue.ToString() ?? null;
        }

        public override string Vanilla()
        {
            return VanillaValue.ToString() ?? null;
        }

        public override string Restart()
```

```
        {
            return RequiresRestart.ToString();
        }
    }
```

Usage

```
//Coming soon
```

Examples

```
//Coming soon
