

**Description:**

Default string[] parser.

Added In: v0.45

Function

```
public class UMFConfigStringArray : UMFConfigParser<string[]>
{
    public string[] DefaultValues;
    public bool KeyBind;
    public bool RequiresRestart;
    public string[] AllowedValues;

    public UMFConfigStringArray(string[] defaultValues =
default(string[]), bool isKeyBind = false, bool requiresRestart = false,
params string[] allowedValues)
    {
        DefaultValues = defaultValues;
        KeyBind = isKeyBind;
        RequiresRestart = requiresRestart;
        AllowedValues = allowedValues;
    }

    public override string[] Parse(string value)
    {
        return value.Trim().Split(new string[] { "," },
StringSplitOptions.RemoveEmptyEntries);
    }

    public override string ToString()
    {
        return string.Join(",", DefaultValues.ToArray());
    }

    public override string Default()
    {
        return string.Join(" ", DefaultValues.Take(2).ToArray());
    }

    public override string Allowed()
    {
        return (AllowedValues.Length > 0 ? string.Join(",",
AllowedValues.Select(x => x.ToString()).ToArray()) : null);
    }
}
```

```
    }  
  
    public override string Restart()  
    {  
        return RequiresRestart.ToString();  
    }  
  
    public override string IsKeyBind()  
    {  
        return KeyBind.ToString();  
    }  
}
```

Usage

```
//Coming soon
```

Examples

```
//Coming soon
