Description:
Default Version parser.

Added In: v0.45

Function

```
    public class UMFConfigVersion : UMFConfigParser<Version>
    {
        public Version DefaultValue;
        public bool RequiresRestart;

        public UMFConfigVersion(Version defaultValue = default(Version),
bool requiresRestart = false)
        {
            DefaultValue = defaultValue;
            RequiresRestart = requiresRestart;
        }

        public override Version Parse(string value)
        {
            return DefaultValue;
        }

        public override string ToString()
        {
            return DefaultValue.ToString();
        }

        public override string Default()
        {
            return DefaultValue.ToString();
        }

        public override string Restart()
        {
            return RequiresRestart.ToString();
        }
    }
```

Usage

```
//Coming soon
```
