

**Description:**

Default Version parser.

**Added In:** v0.45

## Function

```
public class UMFConfigVersion : UMFConfigParser<Version>
{
    public Version DefaultValue;
    public bool RequiresRestart;

    public UMFConfigVersion(Version defaultValue = default(Version),
bool requiresRestart = false)
    {
        DefaultValue = defaultValue;
        RequiresRestart = requiresRestart;
    }

    public override Version Parse(string value)
    {
        return DefaultValue;
    }

    public override string ToString()
    {
        return DefaultValue.ToString();
    }

    public override string Default()
    {
        return DefaultValue.ToString();
    }

    public override string Restart()
    {
        return RequiresRestart.ToString();
    }
}
```
