

This page covers common issues people have with UMF.

If your issue is not found here, you can try asking for help in our [Discord](#).

When asking for help in the Discord, make sure you zip your Logs folder and drop it in with your issue description.

Table of Contents

1. [UMF Installer Errors](#)
2. [Mods do not show up in-game](#)
3. [The UMF Installer is missing from the zip](#)
4. [Missing file\(s\) after installing UMF](#)
5. [Can't open the UMF Menu](#)
6. [Can't open the UMF Console](#)

UMF Installer Errors

All errors with the UMF Installer are due to missing either .NET 4.7.2 (Windows) or mono (Linux & MacOSX).

Windows:

- [Download .NET 4.7.2](#)
- If you are unable to install .NET 4.7.2 then you will need to update your Windows.

Linux:

- If you used a repository to install mono then you probably did not install the complete package.
- Install the mono-complete package.
- If that does not work you can also try installing the mono-devel package.

MacOSX:

- You most likely installed the incorrect mono package. You should uninstall it and change to the Mono Visual Studio package.
- [Download Mono for MacOSX](#)

The UMF Installer is missing from the zip

Your Anti-Virus software likely deleted the file when you extracted it.

Add the folder containing the zip to [exclusions](#) in your Anti-Virus software.

Re-extract the zip file after this is done.

Missing file(s) after installing UMF

Your Anti-Virus software likely deleted the file.

Add the Game Folder to **exclusions** in your Anti-Virus software.

Re-install UMF with the UMF Installer after this is done.

Can't open the UMF Menu

This could be due to one of the following reasons;

- Your keyboard or laptop has a F lock key/Fn key that must be pressed to use the F10 key.
 - You have changed your UMF Menu binding to something invalid. Delete `\Mods\Configs\umodframework.ini` to clear your invalid binding.
 - Part of UMF crashed when starting up. Zip the log files and provide them in the #help channel on our Discord for more help with this.
-

Can't open the UMF Console

The default key binding for the UMF Console is Left Shift + ~.

~ or Tilde is always the key **directly above the tab key** on all keyboard layouts and languages.

If you want to change the binding you can do so within the UMF Menu.
